Let's Check in more detail to setup of plugins:

A. CONTACT MENU OPTIONS SETUP

- You will get Default Contact Enquiry Form in list. You can Add/Edit/Delete form settings from the page below.

Getting spammed? You have protection.

Before you cry over spilt mail...

Spammers target everything: your contact forms aren't an exception. Before you get spammed, protect your contact forms with the powerful anti-spam features Contact Form 7 provides.

Contact Form 7 supports spam-filtering with **Akismet**. Intelligent **reCAPTCHA** blocks annoying spambots. Plus, using **comment blacklist**, you can block messages containing specified keywords or those sent from specified IP addresses.

Contact Form 7 doesn't store submitted messages anywhere. Therefore, you may lose important messages forever if your mail server has issues or you make a mistake in mail configuration.

Install a message storage plugin before this happens to you. **Flamingo** saves all messages through contact forms into the database. Flamingo is a free WordPress plugin created by the same author as Contact Form 7.
